The data information in this press release reflects preliminary specifications and was correct at the time of going to print. However, Ford policy is one of continuous product improvement. The right is reserved to change these details at any time.

<sup>1</sup>The declared fuel/energy consumptions, CO<sub>2</sub>-emissions and electric range are determined according to the technical requirements and specifications of the European Regulations (EC) 715/2007 and (EU) 2017/1151 as last amended. Light Duty Vehicle type-approved using the World Harmonised Light Vehicle Test Procedure (WLTP) will have fuel/energy consumption and CO<sub>2</sub>-emission information for New European Drive Cycle (NEDC) and WLTP. WLTP will fully replace the NEDC latest by the end of the year 2020. The applied standard test procedures enable comparison between different vehicle types and different manufacturers. During NEDC phase-out, WLTP fuel consumption and CO<sub>2</sub> emissions are being correlated back to NEDC. There will be some variance to the previous fuel economy and emissions as some elements of the tests have altered, so the same car might have different fuel consumption and CO<sub>2</sub> emissions. <sup>2</sup> Ford test data based on testing methodology using 1-ft rollout i.e. from a rolling start. <sup>3</sup> Features may require activation. <sup>4</sup> Don't drive distracted. Use voice operated systems where possible and don't use handheld devices while driving. <sup>5</sup> Feature availability dependent on vehicle specification. <sup>6</sup> Driver-assist features are supplemental and do not replace the driver's attention, judgment and the need to control the vehicle. <sup>7</sup> Range and charge time based on manufacturer tested values and calculation according to the WLTP drive cycle. Estimated miles added are based on the first 10 minutes of charging, beginning when the vehicle begins receiving charge. The charging rate decreases as battery reaches full capacity. Your results may vary based on peak charging times and battery state of charge. Actual vehicle range varies with conditions such as external elements, driving behaviours, vehicle maintenance, and lithium-ion battery age and state of health. <sup>8</sup> Cargo and load capacity limited by weight and weight distribution. <sup>9</sup> Measured according to V210-2. <sup>10</sup> Measured according to V214-2. <sup>11</sup> Measured according to V214-1. <sup>12</sup> Represents the lightest kerbweight assuming driver at 75 kg and full fluid levels. <sup>13</sup> Max towing varies based on cargo, vehicle configuration, accessories and number of passengers. Towing limits quoted represent the maximum towing ability of the vehicle at its Gross Vehicle Mass to restart on a 12 per cent gradient at sea level. The performance and economy of all models will be reduced when used for towing.
